# Implications of GM-Crop Cultivation at Large Spatial Scales

Broder Breckling  
Hauke Reuter  
Richard Verhoeven  
(eds.)

**PETER LANG**  
Internationaler Verlag der Wissenschaften

## Contents

Foreword	9
Organising committee and reviewers	10
Welcome Address of the Vice President of the Bremen State Parliament Karin Mathes	11
<b>Chapter I: Causes and effects – starting points for large scale implications</b>	
A simple question in a complex environment: how much Bt toxin do genetically engineered MON810 maize plants actually produce? Christoph Then & Antje Lorch	17
Identification of suitable RAPD primers to analyse oilseed rape ( <i>Brassica napus</i> L.) genetic variability in some regions of Lithuania Algimantas Paulauskas, Milda Jodinskienė & Judita Žukauskienė	22
Oilseed rape production at the Slovenian landscape level and survey of crop to wild gene flow Barbara Pipan, Jelka Šuštar-Vozlič & Vladimir Meglič	27
The variability of processes involved in transgene dispersal – case studies from Brassica and other crop genera Rikke B. Jørgensen, Thure Hauser & Tina D’Hertefeldt	30
GMOs and their unmodified counterparts: substantially equivalent or different? Terje Traavik	32
<b>Chapter II: Dispersal and coexistence of GMO – modelling approaches</b>	
Cause effect chains on potential GMO cropping in Schleswig-Holstein Christiane Eschenbach, Andreas Rinker, David Windhorst & Wilhelm Windhorst	37
Simulation of GM maize-cultivation scenarios under different coexistence regulations Karen Höttl & Angelika Wurbs	43

Analysing cross-pollination studies in maize Hauke Reuter, Simone Böckmann & Broder Breckling	47
Modelling maize cross-pollination probabilities on the regional level – exemplary simulations for the county Elbe Elster in Brandenburg, Germany Hauke Reuter, Broder Breckling, Angelika Wurbs & Karen Höltl	54
Spatial simulation model to analyse pollen dispersal and coexistence scenarios between GM and GM-free crops Simone Gorelli, Alessandro Santucci, Elena Balducci, Marco Mazzoncini & Riccardo Russu	59
Effect of cropping systems on species dynamics and gene flow at the landscape level – a modelling approach Nathalie Colbach	66
<b>Chapter III: Monitoring and assessment of GMO-effects</b>	
Assessing ecohydrological impacts of crops in a catchment area Victoria I. S. Lenz-Wiedemann, Christian W. Klar & Karl Schneider	71
Public GMO location registers in Germany for supporting national monitoring measures Anja Vaasen, Achim Gathmann, Jana Storch & Detlef Bartsch	76
Long-term and large-scale effects of genetically modified organisms require specific environmental monitoring designs Wiebke Züghart	81
Standardised exposure of bait plants to determine the outcrossing from oilseed rape (OSR) into wild relatives Jürgen Franzaring, Ingo Holz, Andreas Fangmeier & Jürgen Zipperle	86
Monitoring the absence of glyphosate and glufosinate resistance traits in feral oilseed rape and wild crucifer populations Jürgen Franzaring, Ingo Holz, Andreas Fangmeier & Jürgen Zipperle	90
Large-scale field trials on gene flow in maize for the development of coexistence measures Maren Langhof, Bernd Hommel, Alexandra Hüsken, Joachim Schiemann, Peter Wehling, Ralf Wilhelm & Gerhard Rühl	93

Two year field study on maize gene flow over large distances Maren Langhof, Bernd Hommel, Alexandra Hüsken, Joachim Schiemann, Peter Wehling, Ralf Wilhelm & Gerhard Rühl	98
Web-based Geoinformation Systems: application for GMO related issues Lukas Kleppin, Gunther Schmidt & Winfried Schröder	103
Cumulative impacts of GM herbicide-tolerant cropping on arable plants assessed through species-based and functional taxonomies Geoffrey R. Squire, Cathy Hawes, Graham Begg, Ali Karley, Pietro Iannetta & Mark Young	108
Dispersal and persistence of genetically modified oilseed rape around Japanese harbours Masaharu Kawata	110
 <b>Chapter IV: Management and control of GM-crops at large spatial scales</b>	
Developing strategies to assist in the coexistence of GM and non-GM oilseed rape crops on an Irish landscape Ewen Mullins, Yann Tricault, Paul Flanagan, Nathalie Colbach & Reamonn Fealy	115
GM agrofuels – more problems to come Antje Lorch	120
Analysis of the spatial density and neighbourhood distances of cultivated oilseed rape ( <i>Brassica napus</i> ) fields in Northern Germany Denis W. Aheto & Broder Breckling	124
Co-existence of GM-crops with beekeeping – impact of GM-crops on the supply chain for honey and other bee products Walter Haefeker	131
Challenges for co-existence in small-scale farming: the case of maize in Brazil Angela Cordeiro Antonio Carlos Alves & Juliana Ogliari	134
Evaluating management strategies to mitigate the impact of seed-mediated gene flow Paul Flanagan, Conor Meade & Ewen Mullins	140

Monitoring design to evaluate biodiversity in Austrian agricultural regions Kathrin Pascher, Dietmar Moser, Stefan Dullinger, Leopold Sachslehner, Helmut Höttinger, Andreas Traxler, Norbert Sauberer, Thomas Frank & Georg Grabherr	146
Beauty and the beast: the socio-ecology of GM canola in Western Canada Stéphane McLachlan, Ian Mauro & Alexis Knispel	151
<b>Chapter V: Setting the frames: integrative interdisciplinary approaches</b>	
The economic impacts of GM contamination incidents on the organic sector Kathleen Hewlett & Gundula Azeez	155
Economics of spatial coexistence: isolation distances versus pollen barriers Matty Demont, Koen Dillen & Eric Tollens	159
The potential of green gene technology in biomass production – a legal examination Katja Rath	163
Evolutionary integrity – an issue to be considered in the long-term and large-scale assessment of genetically modified organisms Broder Breckling	169
Social-ecological approaches to address and manage systemic risks Florian Keil & Thomas Jahn	177
Hybrid regimes of knowledge: challenges for specifying non-knowledge in the context of the GMO-debate Stefan Böschen	179
